**AutoCAD Releases Automatically** The AutoCAD Release Manager is responsible for releasing major new versions of AutoCAD. The Release Manager has a team of approximately 35 developers, testers, and translators that works closely with the AutoCAD product group. They work on AutoCAD and collaborate with the AutoCAD product group on the major AutoCAD and AutoCAD LT releases. The Release Manager and the AutoCAD product group work with the CADIT team to plan and manage the release of AutoCAD and AutoCAD LT. The Release Manager, CADIT, and AutoCAD product group decide when a major new release is available and when it is safe for AutoCAD customers to start using the new release. Each AutoCAD product release is built and tested in three major phases. The first phase is an integrated development cycle (IDC) for AutoCAD and AutoCAD LT. The second phase is the functional test cycle, which includes testing by AutoCAD LT users to confirm that the new release works as expected for users. The third phase is the stability cycle, during which the Release Manager and CADIT team run "frequent builds" on the software. Customers are encouraged to report bugs and feature requests to the Bug Search and Feature Request (FSR) site. Before releasing a new version of AutoCAD, the Release Manager plans and tests the release for

roughly six months. When the Release Manager is ready to release the new version of AutoCAD, it gathers customer feedback and feedback from product group members about new features. The Release Manager decides which features are part of a future release and provides a detailed list of the new features to the product group. After the product group reviews the Release Manager's list and approves the features, the Release Manager releases a new version of

Do the steps one by one. Turkey has bought arms from the United States, citing the need to protect its borders from a rising threat from jihadist groups, despite President Donald Trump's tough talk on Ankara's defense budget. The agreement to purchase Raytheon's Patriot missiles was announced on Monday, just as Turkey's parliament was preparing to debate a controversial constitutional amendment that would scrap the country's secular principles and replace them with an Islamic system of governance. The amendment would likely allow President Recep Tayyip Erdogan to serve a third consecutive term in office. The deal, for \$3.5 billion, and the amendment to the constitution are a politically risky move for Mr. Erdogan, who has recently cracked down on several journalists, politicians and academics for criticizing the president and his Islamist-rooted party. A series of bomb attacks on July 15th have left 39 dead and injured dozens more, while Turkey is still at war with the Kurdistan Workers' Party (PKK), which has waged an insurgency for decades, and a splinter group, the DHKP-C. Even before the deadliest attack of the year, it was clear that the ruling Justice and Development Party (AKP), which is allied with the Nationalist Movement Party (MHP) in a coalition government, would face major political risks if it moved forward with the constitutional amendment. The latest decision, however, shows that Mr. Erdogan is willing to sacrifice his economy in favor of strengthening his military. And the Patriot missile purchase is just the start. "This is a big deal for Turkey," said Aaron Stein, director of the Middle East Program at the Atlantic Council. "The timing of this is so typical of the way that Turkish officials have acted in the past, by rushing into arms deals and then challenging U.S. policy as they run out of money to purchase those weapons." "This could be the same case," he added, "but with greater political risks on top of the usual financial problems." The Patriot missile system, which can

shoot down multiple missiles at the same time, is considered a “land-based defense system” that is intended to prevent incoming missiles or rockets from being launched at military and civilian targets in the country. Turkey already had Patriot systems deployed in its western coastal provinces and Ankara suburbs, but the latest deal would allow for a large-scale deployment, at
