Q: Extension of a measure to the whole space Let  $\mu$  be a finite measure and  $\mathcal{F}$  a collection of disjoint measurable subsets of  $\mathbb{R}$  such that  $\mathcal{F} \cup \{\emptyset\}$  is a  $\sigma$ -algebra and such that  $\mu$  is "absolutely continuous" with respect to the Lebesgue measure (that is, if  $E \in \mathcal{F}$  then  $\mu(E)$

In recent years, magnetic disk apparatuses have come into use in a wide range of fields. In addition, demands for high recording density of a magnetic disk apparatus have increased year by year, and it is desired to develop a magnetic disk apparatus satisfying this demand. In a magnetic disk apparatus, a thin-film head (inductive head) is attached to the surface of a magnetic disk. The thin-film head reads information from the magnetic disk and writes information to the magnetic disk. A magnetic disk apparatus generally has a CSS (contact start stop) function of reading and writing information from/to a magnetic disk without contact between the
