12:52 IST An 18-year-old girl allegedly attempted suicide at a city cinema hall in south Delhi on Monday. The girl was rushed to a local hospital where she was declared brought dead, police said. The incident took place around 11am when the girl was seen jumping in front of a moving metro train. She

was immediately rescued by a passerby and rushed to a nearby hospital. The girl later died at the hospital, the police said. Delhi's top cop said on Tuesday, one was arrested in the case. He had allegedly lured the girl by promising her a job. "On Monday, a girl was seen attempting suicide at a cinema hall in Delhi. She was immediately taken to a hospital where she was declared brought dead," Deputy Commissioner of Police (South) Chinmoy Biswal said. The arrested person was a friend of the girl's family. He allegedly met the girl on Monday and offered her a job. He is absconding. "The accused lured the girl by promising her a job and then

What's New In AutoCAD?

Shape drawing functions improve and are easier to use. You can adjust the size of the width and height of a polyline and an arc. You can use a polar (angle) coordinate system for measuring radial arcs. When you use the relative measure function (hold down Shift or Ctrl and then press the Up or Down cursor keys), the coordinate system (field of view) changes so that the width and height of an arc are based on its actual diameter rather than on the working drawing unit. When you use the relative measure function, the field of view is based on the actual diameter of an arc. When you are working with large drawings,

navigating to and from commands can be time consuming. There are two new Navigate to commands: Navigate to Current and Navigate to Current in This View. Navigate to Current searches the drawing for the current model space object.

Navigate to Current in This View is similar but searches only for objects in the drawing view. You can now send parts, entities, or blocks to the command line. The new Send and Send to menu choices are helpful if you are sending a list of objects or blocks to the command line. When you select the Align tab of the Selection Options dialog box, you can now align block boundaries to workplanes and fit by vertices. The text display tool, Text Style, can now

handle underscores (_). Command Line Toolbar: You can customize the ribbon buttons on the command line. You can use any font of your choice, change the color of each button, and change the foreground and background colors of the buttons. You can assign labels to the button headings. The button labels will display under the ribbon buttons. You can hide, lock, and un-lock ribbon buttons. You can control the behavior of the Backspace key. When you are dragging something on the screen, you can see the cursor image and details of the object. The cursor can also be hidden while you are dragging. You can use the control panel to change the name of a command on the

command line. The Title Bar drop-down box allows you to specify the location of the title bar. The automatic axis scaling button in the Ribbon tab of the Options dialog box can now be accessed when you have Ribbon selected. When you insert a path, you can increase the thickness of the line by using a new command
