I have a hard time grasping and fixing this because it is not a single string I have multiple lines. The lines containing ` and ` get their values from the previous line. How do I get only the lines that contain the string "cecilinternalmedicine24theditionpdfdownload"? A: You can use re.search or re.findall. f = open("file.txt") str = f.read() print(re.findall(".\*cecilinternalmedicine24theditionpdfdownload.\*", str)) Upset as new coronavirus continues to spread around the world, US researchers on Monday were granted a permit to fight the virus at the White House, NBC reported on Monday. The researchers are able to attempt to develop a vaccine or therapeutic against the new coronavirus, according to the New York Times. The researchers have been attempting to obtain a permit to test their vaccine for years. They previously filed for permission in 2018 and were denied, according to Bloomberg. ADVERTISEMENT Per a letter from White House Press Secretary Stephanie Grisham, the researchers were granted a permit after filing a request "that their request be reconsidered," said NBC. An FDA spokesperson said they could not comment on the matter because it was a "trademarked asset" belonging to a biotech company, according to NBC. An FDA spokeswoman added that they had not received the request. A member of Congress criticized the attempt to issue the permit. "It's not too much to ask that these researchers be allowed the opportunity to do the research that could prevent the next pandemic," said Rep.
